

Front-end Senior (Internal project)

We're looking for a dedicated and talented **Senior Front-End developer** with extensive knowledge of application architecture and solid experience in working with HTML and CSS. As a member of our engineering teams, you will have the opportunity to join our highly-skilled professionals to strengthen the successful product growth for the iLighten project.

iLighten's products are targeting software developers evolution, increasing productivity for technical professionals to ensure software teams perform more efficiently and cooperatively. They build products with the data-oriented approach that requires creating a visual representation of the data, and as a result, makes the final product straightforward for the end user.

Requirement:

- Over 5 years of extensive experience as a Front-End Developer;
- Strong experience working with HTML, CSS (pixel-perfect orientation);
- Experience with popular React.js workflow (Redux);
- Knowledge of modern GUI development tools (Gulp, Webpack, etc.);
- Ability to create an application architecture;
- Experience with D3 considered as a huge plus.

Duties:

- Conduct software analysis, debug and solve issues/problems;
- Ability to work as part of a geographically diverse team;
- Goal-oriented character with high levels of responsibility;
- Team player with strong technical written and oral communication skills;
- Possess excellent analytical and robust problem-solving mentality;
- Ability to meet deadlines and adaptable to ever-changing prior;
- Uphold best practice and quality assurance principles.

If you are ready to engage in the development of a challenging but fascinating project, are an excellent team player, obsess over details, and want to grow as a master of your craft with professionals, we are waiting to welcome you to our team!

We offer:

- Interesting working at our cozy office;
- The company of a highly qualified and motivated team;
- Significant contribution to your business portfolio;
- Flexible working hours.
